## Foreword

Dear Teacher / Parent

The book contains sets of worksheets aimed at imparting knowledge to the child related to language, art, mathematics, drawing and general knowledge.

The worksheets are designed using the concept of collaborative learning so that the child can develop a holistic learning pattern in the foundation years of her/his education. These worksheets will help achieving various yardsticks and levels of learning:

**Knowledge** - Can students recall facts?

**Comprehension** - Can students understand and explain ideas?

**Application** - Can students use ideas?

**Analysis** - Do students see relationships (contrasts, comparisons, breaking into parts)

**Synthesis** - Can students combine the parts to make whole?

**Evaluation** - Can students make judgments?

By using these categories, we have designed more effective and comprehensive curriculum and evaluative instruments for children at various levels of cognitive growth.

There are instructions given on every worksheet. The learning of the child will depend upon the ability of the parent / teacher as how sincerely they follow the instructions and emphasise on the objectives.

There are teacher / parent guiding notes before each set of worksheets pertaining to a subject. Parents / Teachers must read the guiding notes and instructions carefully to understand and implement them. These worksheets are for the child so make sure that you may help and guide if required but don't do them for the child.

The worksheets are perforated. The child should be given one worksheet at a time and once completed you may keep them in separate folder.

"My Planner" is a designed keeping in mind the most logical flow of the curriculum for the child to learn. Parents / Teachers may decide to change as per their requirements. Keep a track of worksheets by maintaining the record.

There are three sets of Self Assessment given at the end of the worksheets. It is important to note that the scores in these assessments are not important, what is important is the learning and understanding ability of the child.

Happy teaching and learning...

## Guiding notes for Parent / Teacher

### General Knowledge

All parents try their best to inculcate good habits in their children, which may help them to grow up as smart individuals. They wish their kids to shine in every field of life. One of the things which is crucial in this process is to develop an interest in general knowledge at an early age, so that your child fares well in today's cutting-edge competitive world. General knowledge, will help them to relate and understand the varied facets of the world and its working better. The stronger is one's general awareness and knowledge the easier it gets to relate to other subjects; it also has a link to improved problem solving and open-mindedness.

Improving General Knowledge of your child is not an overnight thing. It is a slow and gradual process. The mantra is to feed on the curious mind with more and more knowledge, whereby the hunger of knowing more keeps increasing. The efforts have to begin during early education, in order to develop a habit in young kids, to always be good with their G.K. skills. Given below are methods that may well become habits and in turn effectively help your child improve with this particular personality enhancing trait:

- Don't hinder the curiosity of the child by forcing them to stop asking questions. The kids may ask irrelevant or illogical questions but you must try resolving her / his doubt.
- Ask questions wherever you feel it's good for the child to know something new.
- Develop understanding of environment around the child.
- Explain and discuss with your child so that she/he can develop interest in new things.
- Develop reading habits in the child. The child can at least see photographs in newspapers and magazines and a discussion over it can enhance her / his knowledge.

We have general knowledge worksheets for kids that help the child develop a keen sense of curiosity resulting in knowledge about happenings in the world he or she lives in. In schools, general knowledge is not only taught as a separate subject but there are also regular contests or quizzes held at major levels to encourage and award the child who is proficient in the subject. We understand the importance of all round knowledge and hence have general knowledge facts for kids on varied subjects. We try and teach your child varied topics. There is no syllabus or boundaries to learn General Knowledge, still we have tried to cover topics of vital importance and relevant to the child.

Happy Learning
